Cityline Low Floor

the future of accessible transport

Cityline Low Floor the future of accessible transport

When EVM embarked on the journey to create the next generation of low floor sprinter, it was clear that it had to produce something extra special. Following an intensive design, development and testing programme, the result is the extraordinary Cityline range, a minibus of impeccable pedigree with exquisite styling and interiors to match.

engineered accessibility

The drive system was designed with reliability and particularly ground clearance in mind. The Cityline achieves 200mm of ground clearance while maintaining an entry height of 270mm.

reliable accessibility

The 1200mm rapid sliding double door brings an outstanding level of reliability to the Cityline. Both doors operate on the same guide ensuring one door is never knocked out of alignment with the other. The door opens only 100mm outside the body.

environmental impact

The Euro 6 Sprinter achieves some of the lowest emissions standards in the commercial industry. Fuel consumption figures as high as 27 mpg on mixed cycles ensure the Cityline is a frugal as it is stylish. With a maximum capacity of 25 passengers, the Cityline takes productivity as a priority.

a driver favourite

The driver's environment is engineered around the driver to maximise productivity with options including, full drivers protection screen, swivel seat base, multiple ticket machine mount configurations, 12/24 volt power supply, tablet mounts, etc all laid out in an ergonomic fashion.
